

Boxplot: Median Value of Owner-Occupied Homes

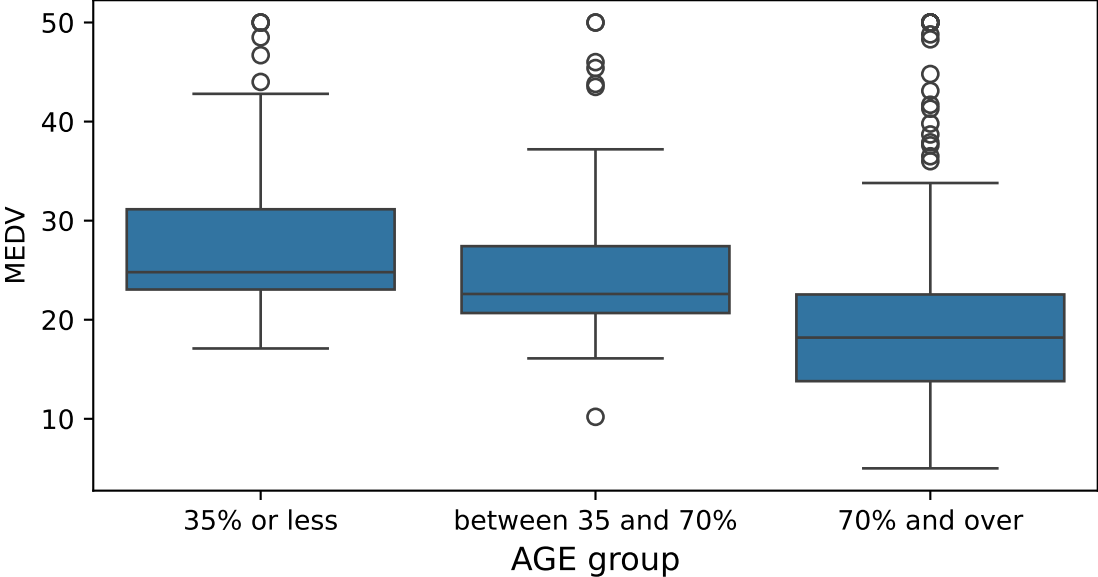

Without outliers : Median Value of Owner-Occupied Homes (in \$1000)

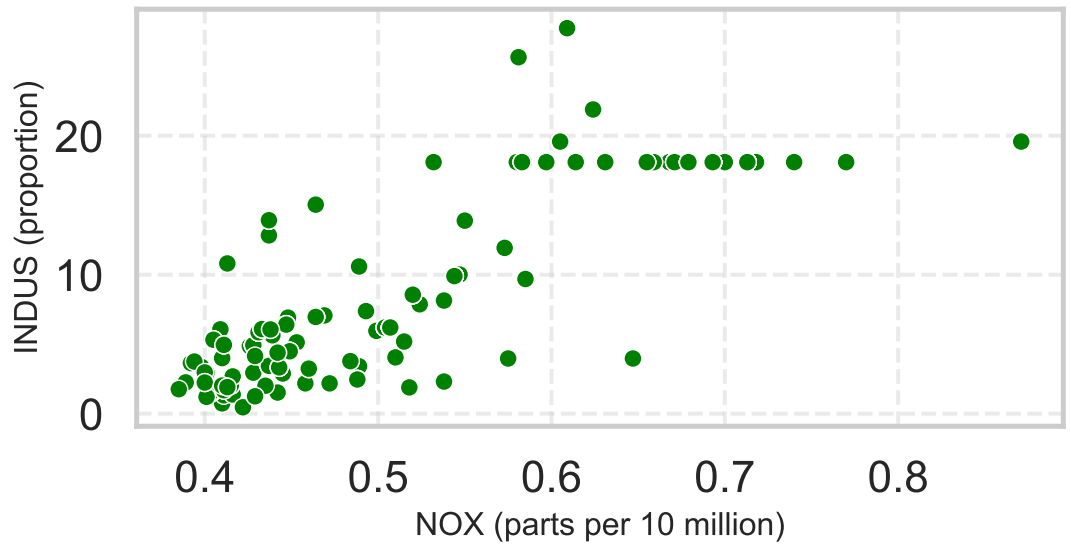

Histogram of Charles River Variable (CHAS)

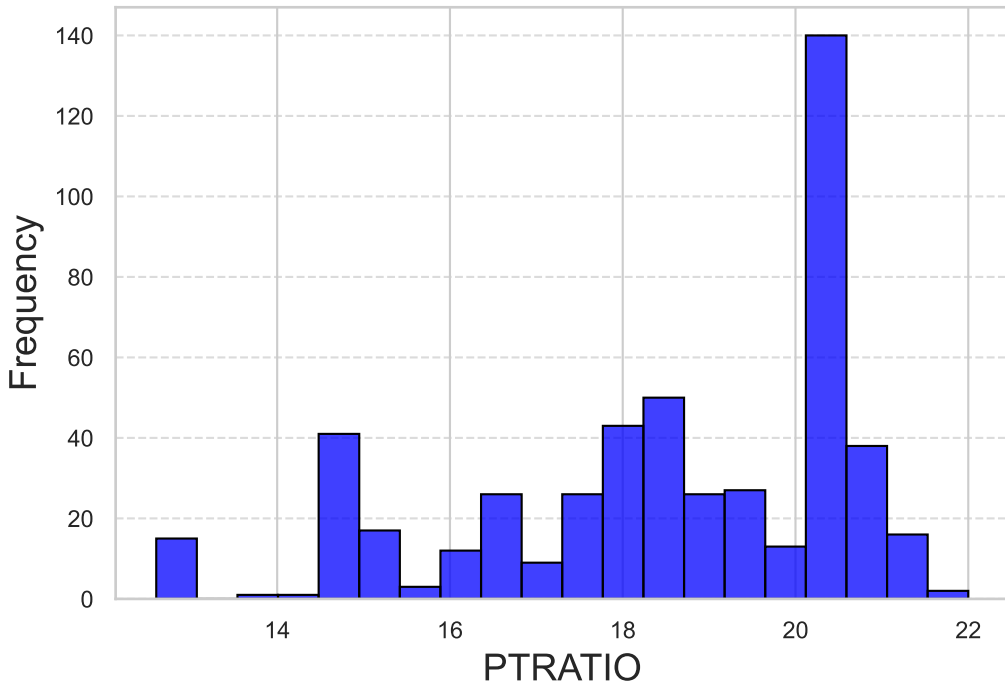

Boxplot of Median value of owner-occupied homes (MEDV) vs AGE group

Relationship between Nitric oxide concentrations (NOX) VS Non-retail business (INDUS)

Histogram: Pupil to Teacher ratio variable (PTRATIO)

T-TEST: Charles River Impact on House Values

Test Statistic: 3.9964

P-value: 0.000074

Significance Level (α): 0.05

Result: REJECT NULL HYPOTHESIS

Conclusion:

There is a significant difference in median house values between houses bounded by the Charles River and those not bounded by the river.

ANOVA: House Values Across AGE Groups

Test Statistic (F): 36.4076

P-value: 0.000000

Significance Level (α): 0.05

Result: REJECT NULL HYPOTHESIS

Conclusion:

There is a significant difference in median house values for each proportion of owner-occupied units built prior to 1940 (AGE groups).
